

Machining & Welding Services

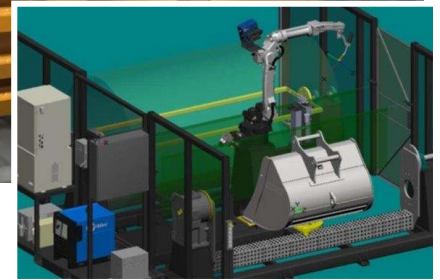

Using innovative equipment, we tackle large and complicated machining and welding projects in every industry - in our shops or on your site.

Here's how:

- Experience – over 40 years of experience.
- Shop size – over 35,000 square feet of shop space provides the in-house capability to engineer, fabricate and install projects of all sizes.
- Industry-leading technology – automated equipment increases employee safety and ensures quality at a competitive cost.

Machining & Welding Services

We have more than 40 years of experience in Fort McMurray Wood Buffalo, with the largest and best-equipped machine shop in northern Alberta. We deliver a wide range of custom solutions for industrial and commercial clients. With safety as a priority, our state-of-the-art technology and processes create efficiencies and exceed benchmarks to save you time and money. Our quality rebuilds and repairs have been proven to decrease costs by meeting or exceeding OEM specifications. Add in versatility through our mobile capabilities, and we offer the complete package you need.

Our industry-leading equipment includes a CNC oxyfuel and plasma cutting table, robotic welders, portable CMM, digital alignment tools, CNC lathes and 3-5 axis CNC mills.

We specialize in rebuilding and repairing:

- Clams and back walls
- Side frames
- Dippers and doors
- Strut faces
- E-bars
- Tail casting
- Machine truck boxes
- Truck frames

We can customize solutions for any other light and heavy mining equipment.

We offer field machining and repair services:

- Flange facing and align boring
- Bed milling
- Laser alignment
